

# Just To Let You Know

# Hazel & Willow

## Donations

Thank you for your donations so far!  
We would still be very grateful for any dolls or cushions for our cosy corners and role play areas. Do keep bringing in any recycled junk that we can use for modelling.

Due to allergies they need to be **egg/dairy/nut free**. Office based boxes, toiletries, non dairy drink bottles, old wrapping, ribbon, tubes etc would be very welcome!

Sian told us about the digestive system and what happens to the food we eat. We tore up a slice of bread, added water and vinegar (stomach acid) and squished it together so it looked like pool!

Sue told us about how the heart is a muscle and pumps blood around our body. We had a lovely time looking at books and pumping red water in the water tray.

We learnt about the brain and the nervous system with Sarah. We played a feely bag game and it was amazing how our brains could work out what the objects were just through touch!

## Body LEAP!

On Monday morning the children took part in a carousel of activities and learnt about how different parts of the body work. The teachers looked funny dressed up as scientists!

We have stuck the curly caterpillar letters we've been practising in the JTLYK books. Do practise these with your children at home. You could use chalk, paint, flour, sand, water as well as good ol' pen and pencil. Tracing can also be helpful if it's proving tricky.

Seonaid (who is a trainee teacher working in Willow this half term) talked to us about the lungs. She had made model lungs using small bags for us to breathe into. We also ran around and did lots of exercise in the hall and then listened to how our breathing had changed.
